

Trump's border wall will hurt dozens of animal species

Written by By Center for Biological Diversity

More than 650 miles of barriers already exist along the border. These walls, fences and barriers cut through sensitive ecosystems, disrupt animal migration patterns, cause catastrophic flooding, and divide communities and tribal nations.

Congress has already approved more than \$3 billion for border walls since Trump took office. But that wasn't enough to satisfy Trump's demands. Now, with the declaration of a national "emergency," Trump is illegally attempting to funnel billions more to border wall construction in some of the country's most sensitive and spectacular landscapes.

Trump's wall would harm border communities, perpetuate human suffering, destroy thousands of acres of habitat and halt the cross-border migration of dozens of animal species. In fact, as revealed in the Center's 2017 report *A Wall in the Wild*, 93 threatened, endangered and candidate species would potentially be affected by construction of a wall and related infrastructure spanning the entirety of the border.

This is a looming tragedy for the region's diverse wildlife and people, as well as its rugged and spectacular landscapes. We're fighting in the courts, in Congress and in our communities to stop Trump's cynical attack on our beautiful borderlands.

Take our pledge to fight Trump's border wall today.

Trump's border wall will hurt dozens of animal species

With headquarters near the border in Tucson, Ariz., the Center has worked to preserve and protect the remote beauty and amazing biodiversity of our borderlands for decades. We've been fighting against border militarization — including the border wall — since the late 1990s, using litigation to block unlawful border policy, grassroots lobbying to stop legislation that would exacerbate environmental damage, and creative-media and public-education campaigns to get out the truth about the real impacts of the hugely expensive, largely ineffective and environmentally devastating border wall.

In April 2017 the Center partnered with U.S. Rep. Raúl Grijalva in filing suit seeking a thorough analysis of the environmental impacts of border-security policy, including the border wall, under the National Environmental Policy Act. Another suit challenges the Trump administration's waiver of more than three dozen environmental, public-health and tribal-sovereignty laws in order to rush border-wall construction. And a third suit seeks to force the administration to release documents regarding its border plans, thus far withheld from the public.

We were the first organization to sue Trump over the border wall and have since filed six suits challenging border wall construction. Our most recent litigation challenges Trump's emergency declaration and use of military funds to build the border wall. The Center also has sued the administration to challenge border-wall construction in the Rio Grande Valley and near the Santa Teresa Port of Entry in New Mexico. In 2017, we partnered with U.S. Rep. Raúl Grijalva, seeking a thorough analysis of the environmental impacts of border-security policy, including the border wall, under the National Environmental Policy Act. All of these suits are pending.

In May 2017 the Center partnered with the Tohono O'odham tribe in Mexico to file an endangerment petition for El Pinacate and Gran Desierto Biosphere Reserve in Mexico, just south of the border in the state of Sonora. A wall in that area would block cross-border migration of endangered Sonoran pronghorn and restrict access for the Tohono O'odham people, who travel across the border regularly for traditional and ceremonial purposes.

In July 2017 the House of Representatives approved the Trump administration's \$1.6 billion budget request to expand the U.S.-Mexico border wall, ignoring threats to protected wildlife refuges and border communities. Since then, the administration has been slowly moving forward with its plans — and waiving dozens of laws along the way.

No Border Wall Resolution Campaign

Trump's border wall will hurt dozens of animal species

The Center has helped launch a campaign to pass resolutions in states, cities and counties across the United States opposing the border wall, with 39 passed so far. Many of these resolutions contain provisions for jurisdictions to divest from companies that agree to design or build the wall. Numerous local governments have enacted No Border Wall Resolutions. ***If you're an elected official or representative of a community or organization who'd like to get involved in our campaign to pass No Border Wall resolutions across the country, please contact***
