They say that in the old days, tall buildings had to be built on a single roof, the roof had to be flat so that you could walk on it. But now that we have elevators, we don't need to do that anymore. We can just build a tall building and have an elevator to get up to the top. That's what happened with the Empire State Building. It was built in 1931 and it was the tallest building in the world for many years. It's still standing today and it's a great example of how technology has changed our world.
